11/05/2026 - 25Live LYNX Interface

- Academic Priority now removes the location from a conflicting 25Live event even when that event, or an event bound to it, is locked
- A new "Reference Data" page under the Utilities menu lets users browse the reference data LYNX has received from the SIS, including buildings, campuses, departments, locations, statuses, subjects, and terms, with search, pagination, and CSV export for each type
- The Section Data detail page now includes a "Change History" that lists each history process that touched the section, when it ran, the fields that changed, and the previous and new values, with links to the history process
- Users can select bound groups on the Data Binding page and use "Import Checked" or "Delete Checked" to import or delete only the selected groups
- Workday auto-initialization now refreshes only scheduled assessment (exam) and registered headcount data, because the Student Transaction Log Outbound Connector detects course section changes
- Export messages for Ethos room conflicts name the section that holds the room, so users can free the room or choose another room in 25Live
- For Ethos Banner schools whose Ethos environment supports version 11.1.0 of instructional-events, the room-conflict override for crosslisted sections is always on, and the setting that controlled it was removed
- Fixed an issue where a deadlock while staging data for API integrations (Workday, Ethos, and Anthology) left a history process waiting and prevented its changes from loading, and ensured initializing a term while a history process is running no longer causes a deadlock
- Resolved an issue where some new sections and exams were missing from LYNX after a Workday initialization
- Addressed deadlocks that stopped SIS data sync when two SIS history processes ran at the same time
- Corrected restart recovery so SIS history processes and exports for API integrations successfully resume after a restart
- Increased loading speed of the extract set revision history
