

Setting Default Location Layout Setup and Takedown Times

Last Modified on 02/27/2024 11:36 am PST

In the [Location Details](#) view's Layouts section, 25Live allows you to add and manage how much additional time will be added to an event using those layouts. These times are applied in the Event Form when a user chooses a specific location and layout.

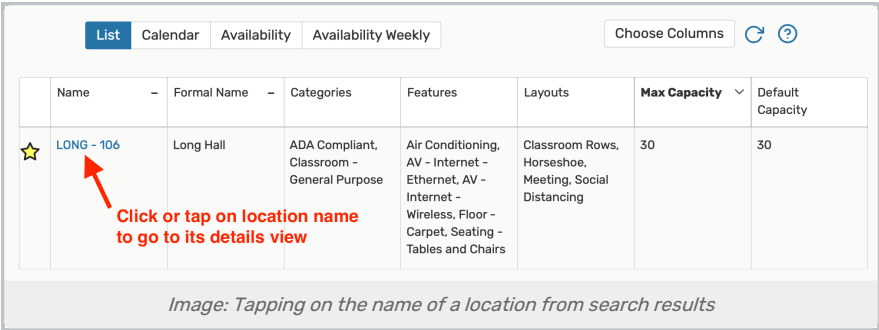

Security Note

To access this feature, your 25Live user must have "Full Control" for locations for Functional Level Security and Object Level Security. Administrators using the [Series25 Group Administration](#) tool should set Admin: 10.0 *Create, Edit, and Copy Locations* in the Admin Options area to Yes. If you would like your permissions changed, contact your 25Live administrator.

How to Add Default Setup and Takedown Times

1. Go to the Location Details View

The name of any location across different views in 25Live is a link you can use to view its details. After clicking or tapping on a location's name from any screen, the **Details** view shows by default.

2. Look at the Layouts Section and Choose a Layout

Layouts

Default Layout

As Is

Click on a layout name to view its details in the Layout Details panel.

Name	Cap	Setup	Takedown	Remove
Max Capacity	25			
As Is	25			
Circle	20	10 Mins	10 Mins	
Classrooms Rows	25			
Seminar / Conference	15	30 Mins	30 Mins	

Add Layout

Select an item

Default Instructions [Edit](#)

Image: In this example, we will add default times to the Circle layout.

Each layout configured for this location can have additional default setup and takedown times added.

Tip

[Master Definitions for all layouts](#) can be managed in **System Settings** within 25Live.

3. Edit Each Additional Time Type and Save

Default Instructions
This vehicle is located in the 52 west parking lot. Campus vehicles are labeled with the green fleet sticker in the lower-right back windshield. Please be sure to match the vehicle number to your reservation confirmation.

Map
none

Animation: Use the edit links on each layout's row to edit the fields for setup and takedown times.

In each column, for **Setup** time and **Takedown** time, use the **Edit** icon () to reveal a form in which you can add time. Add time in **Days**, **Hours**, or **Minutes** by typing in the fields or using the up and down arrow controls.

Of course, you don't always need to add both setup and takedown times.

How to Edit Default Setup and Takedown Times

Layouts

Default Layout
As Is

Click on a layout name to view its details in the Layout Details panel.

Name	Cap	Setup	Takedown	Remove
Max Capacity	25			
As Is	25	1 Days	10 Mins	X
Circle	20	5 Mins	10 Mins	X
Classrooms Rows	25			X
Seminar / Conference	15	30 Mins	30 Mins	X

Add Layout

Edit icons to change values

Each layout name is link to reveal image and instruction options

Add new layouts

Image: Use the Edit icon in each column to change the default layout times.

Go to the Summary screen of any [Location details](#) view by using the link on any location name. In the Layout section, use the **Edit** () icon to reveal the additional time fields. Change the **Days**, **Hours**, or **Minutes** fields by typing or using the up and down arrow controls.

Using Default Setup and Takedown Times in the Event Form

Note: This Feature is Not Yet Available for Express Scheduling

Default location layout setup and takedown times currently will not be added to reservation duration times for events created using [Express Scheduling](#). If your institution needs this feature, you can add and vote for feature requests using the [Series25 Customer Feedback Boards](#).

When creating an event using the [Event Form](#), any default setup and takedown times set for a chosen location and layout will apply automatically upon changing the layout.

1. Begin Creating With the Event Form

Follow the steps outlined in [Creating Events With the Event Form](#) to begin creating your event.

2. Choose a Location and Layout

In the **Locations > Locations Search** section of the Event Form, find the location you want to reserve, and choose a layout. If the layout you need is selected by default, choose a different layout, then re-select the desired layout to apply its times.

Note: Availability Checking Does Not Include Default Setup and Takedown Times

When searching for available locations, the search will not currently factor in any [additional time](#) set for layouts for the locations, partially due to a layout not having yet been chosen. If the additional time exceeds the availability window for that location, you may see a conflict and need to choose a different location.

3. View the Added Time in the Additional Time Section (if available)

Image: The Additional Time section will reflect the addition of your default location layout times.

Scroll up to the [Additional Time](#) section of the Event Form to view the amount of time added to the Reservation Duration based on choosing your location and layout.

If your user's security group's event form configuration does not have the Additional Time section visible, the added setup and takedown times will still apply.

Image: After – when the second location was added, the Additional Time increased to meet the minimum of all additional default times.

However, if you remove the layout and/or location/layout with the longest default time(s), the longest time(s) will be retained in the Additional Time section. You can manually change the times after removing a layout if needed.

If Using Layouts in Events with Segments

If you are using default location layout times in an [event with segments](#), the times are stored differently. While additional event times are usually stored at the segment level (see [Learning About 25Live Event Structure](#)), these default location layout additional times will be stored at the occurrence level. This change allows you more flexibility in setting these times for different layouts in [complex events](#).
