## Single Sign On Authentication Options

## (

Security Note
Users in the System Administrator ( -1 ) group can access these settings as well as any user with Admin: 16.0 Change Security Configurations set in Group Administration.

If you use a third-party single sign-on (SSO) scheme such as Shibboleth or LDAP with 25Live, users are automatically created in 25Live from your existing directory. You can use these settings to determine which group the new users belong to.

Select the Authentication Options choice in the menu at the top right:

| Group Adr | (1) Groups | $\times$ |
| :---: | :---: | :---: |
|  | Navigate to | $\wedge$ |
|  | Authentic |  |
|  | Go to Tool | $\checkmark$ |
|  | Preferences | $\checkmark$ |
| Image: Authentication Options menu. |  |  |

On this page you can set the following options:

| Setting | Notes |
| :--- | :--- |
| Default <br> group for <br> new users | Any new user submitted to 25Live will be placed in the default security group you specify here <br> unless the user is passed in with a valid security group that already exists in the Series25 database. |
| Behavior for <br> existing <br> users | Whenever any user authenticates who is not a new user or a system administrator, one of two things <br> - Move the user from their current security group to any new group submitted with the user, as <br> long as the security group already exists in the Series25 database. <br> - Ignore any passed-in security group, so the user remains in their current 25Live security <br> group. |

Note

Any existing user already in the 25Live System Administrators ( -1 ) security group will never be moved from that group, regardless of the option selected here-even if a different, valid security group is passed in with that user.

| Group options for third-party authentication |
| :--- | :--- |
| Select the default group for new users |
| Select the default group tor new users |
| Default Users (-2) |
| This default security group is applied only to new users that are passed in with no security group attribute, or with a security group that isn't in the Series25 database. |
| Choose whether to move existing users into a passed-in security group |
| Place user in passed-in security group |
| Ignore passed-in security groups |
| Choose whether to place users into a security group that's being passed in with the user. If you elect to use the passed-in security attribute, users are moved from their current |
| security group (as long as the passed-in group exists in the Series25 database). This setting is ignored if the user is already in the system administrators (-1 ID) security group; |
| that is, a user is never removed from the administrators group during authentication. |
| Cancel Save Authentication options |
