- [Setting Up the Mobile Calendar Detail View](#)

After you complete your configuration work in **Publish Settings**, you are ready to begin selecting and styling the calendar views for your new calendar. The **Calendar Spuds** tab contains all of the elements that make up your calendar view. On this tab, you will see the spud code that generates the main calendar view as well as its associated pop-up view and **Event Details** view.

The **Calendar Spuds** tab also contains a mobile calendar view that 25Live Publisher will serve when it detects that a user is using a mobile device. To set up your **Main Calendar Spud**, you will be required to make configuration choices concerning:

1. The Main Calendar Spud,
2. The Available Calendar Views,
3. The Event Detail View,
4. The Popup Detail View,
5. The Mobile Calendar View, and
6. The Mobile Calendar Detail View.
