

A User Cannot View or Edit Draft Events

If a user cannot view or edit a specific event in draft mode, it may be that they don't have the correct Object Level Security rights to view/edit that event, or that the Default Object Level Security needs to be adjusted.

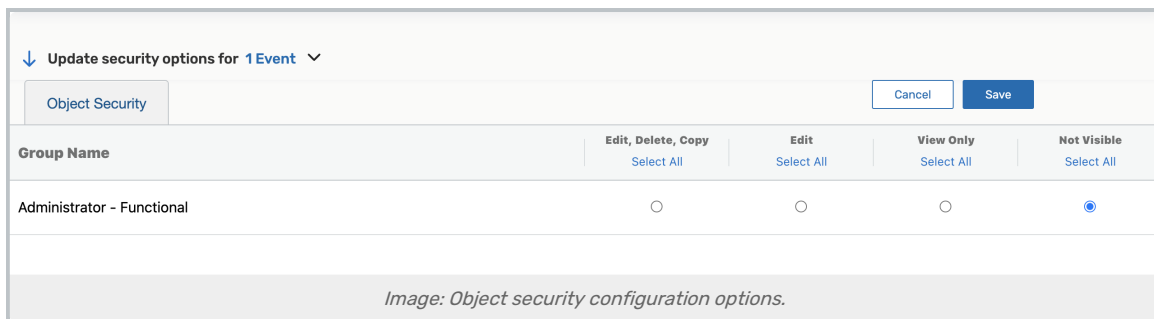

Basic Assumptions

1. This user has logged into 25Live.
2. This user can usually see/edit events.

Troubleshooting Steps

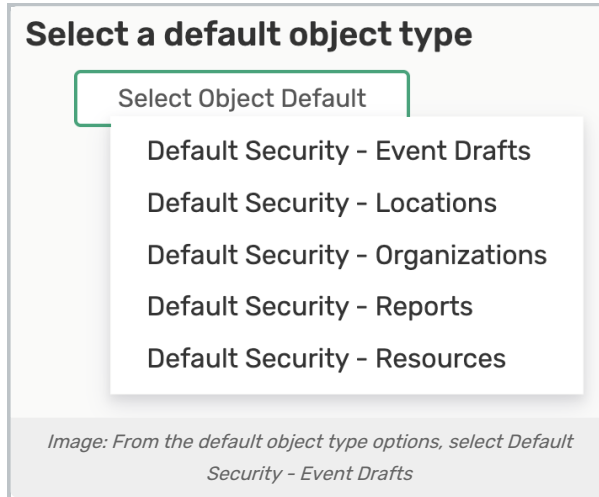

Check the Event Object Level Security

- In Series25 [Group Administration](#), select **Event Security** from the **Configure...** menu.
- Search for the event that the user cannot view/edit.
- In the Object Security column, verify that the user access is set to **Edit Delete Copy, Edit, OR View Only**, depending on whether they need to view or edit the draft.

Check the Default Object Security

- In 25Live **Group Administration**, select the security group.
- In the **Configure...** menu, select **Default Security**.
- From the **Object Default** options, select **Default Security - Event Drafts**.

- Check that the user has the correct rights. Event Draft default security can be set to four levels of access:
 - **Can't view:** Prevents the user group from viewing or using this function.
 - **Can view:** Allows the user group to view event drafts.
 - **Can view and edit:** Allows the user group to edit existing event drafts.
 - **Can view, edit, create and copy:** Allows the user group to edit, create, and delete event drafts.
