

## Event Location Appears as “Private”

If a user is viewing an event and the location displays as Private, it's likely that the user does not have sufficient Object Level Security permission to see the space.

### Check the Permissions

- In [Group Administration](#), select the security group that is not able to see the location.
- In the **Configure...** menu, select **Location Security**.
- Use the **Search** to find the location.
- From the **Actions** dropdown menu, select **Edit Object Security**.
- Check that the object security is, *at minimum*, set to **View Only**.

### Object Security Edit Policy

1 Selected Locations

- CSS 234

Set object security edit rights for the selected locations to:

- ✓ Not Visible
- View Only
- Edit
- Edit, Delete, Copy

*Image: To be able to see the location name on an event, users will need Object Security viewing rights.*
