

07/28/2022 – X25 Analytics

Last Modified on 07/28/2022 10:27 am PDT

- You can now allow regular or administrative use by security group of X25 Analytics Projects with the use of a new "Security" button that links to the [Series25 Group Administration](#) tool (using the "3.1 Administrative Access to X25 Analytics" permission)
- Individual Events and Locations can now be selected in a snapshot's [Data Filter](#)
- *Additional Fixes and Improvements*
 - The "[Class/Event Placement by Room Capacity](#)" report has an updated legend that now displays a new look and an "Enrollment Meets Room Capacity Exact Match" item
 - The "[Aggregated Meeting Patterns](#)" report in Section Analytics has been renamed to "Aggregated Non-Compliant Meeting Patterns," and descriptions have been added or improved for this and other reports
 - The headers remain visible in all [Section Analytics](#) reports whether or not data is returned
 - New [Tree Map](#) grouping options include "All" (previously "No Grouping") and "Breakpoints" (formerly "Range")
 - Made column headers more concise in the "Events" table with clearer, more full labels
 - The [Metrics summary page](#) can now be shared to a story
 - [Project](#) lists are now sortable
 - Removed erroneous ability to create snapshots in a project where the user has view only permissions
 - Ensured the Default Data filter always saves changes, and made sure Quick Snapshots are always successful
 - Fixed unavailable "Simulate" button after creating a new simulation run in the [Optimizer Modeling](#) and selecting lists, and ensured simulation runs can be removed
 - Resolved issue where location counts no longer appeared in the "[Passing Times Traffic](#)" report after toggling the display options
 - Addressed sorting issue in tables when grouping links in a column
 - Fixed overlapping text display issue in Safari within the "[Schedule Distribution](#)" report
 - Ensured select mode checkboxes and labels always appear when changing filters in the "[Demand By Time](#)" report, and clarified the representation of events spanning multiple time periods
 - Limited access to [projects and snapshots](#) for users with insufficient permissions
 - Standardized language and labels across the application
