

08/04/2022 – 25Live

Last Modified on 08/08/2022 11:12 am PDT

- New hierarchy bulk edit action: [Inherit Folders](#)
 - New document management scope: [Organization Based](#)
 - *Additional Fixes and Improvements:*
 - New variables for billing/invoicing and organization custom attributes added in [Document Management](#)
 - Time variables can once again use modifiers successfully in Document Management (i.e. short, mediumDate, fullDate, etc)
 - Fixed issue where occasionally the Availability View would populate with event searches instead of location searches
 - Removed duplicate "Rate Groups" header in System Settings > Pricing Settings > Pricing Set-Ups > [Rate Groups](#)
 - New tip added to System Settings > [Event Save Emails](#) under Template Instructions, instructing on how to add an attendee
 - Text adjustment in the Assigned To column of the Task List, to be more readable at different column sizes
 - Fixed issue where occasionally folders aren't visible in Pro hierarchy but are visible in Administration Utility hierarchy
 - Corrected issue where after saving a new Folder Type in Event Types > Hierarchy and returning to the folders list, the folder display names are missing, showing only icons
 - Deleting a contact that was attached to an Event Type Notification Policy no longer prevents the loading of the event type for editing in System Settings
 - Fixed issue where users whose timezone differs from the system timezone can see an incorrect offset start/end time when editing date constraints
 - An unexpected authorization prompt no longer pops up when viewing a resource or location while not logged in
 - Fixed issue where updating a location custom attribute type displays the prior value instead of the new one
 - Minor UI/UX improvements to various UI event type hierarchy and custom attributes.
 - Consistency improvements to the UI text when viewing a calendar on a mobile device
 - New accessibility improvements to event form dropdown menus
-
