

Sample XML Files for Eval25

Below are three sample Eval25 XML files:

- [real_example.xml](#) : an example of an uploaded file with sanitized information
- [xml_example.xml](#) : an example of a simple file containing only one row
- [xml_example_ta.xml](#) : another example of a simple file containing two rows - one for a parent course, one for an associated course

Note

When associating a TA course with a parent course, the <ta> tag should be set to 1. In addition, to match with courses that share the same course id, rather than having to share a course id, department, offering, and section, add a <ta_type> tag that is set to 2. Type set to 1 TA courses will inherit most course information from their parent course, but type set to 2 TA courses will not.
