

03/02/2023 – 25Live

Last Modified on 04/27/2023 3:41 pm PDT

- New – Event Save Email [Template variables](#):
 - Setup, Pre-event, Post-event, and Takedown variables
 - Table builder variables
 - List builder variables
 - Organization variables
- New – [Document Management variables](#):
 - List builder variables
 - Organization variables

Other Fixes and Improvements:

- New ability to choose between **Notify Only** or **Approval Required** when [bulk editing notification policy](#)
- Fixed issue where adding an assignee contact to a task consistently results in an error, even when the contact add is successful
- Updated Task list sorting; item column now sorts by object name, regardless of the number of tasks.
- The **Rate Groups** table now adheres to the sort order
- Removed the **Schedule View** option from the **Choose a View** dropdown menu on event **Schedule** tabs
- Image-type attributes have been removed from document and template dropdowns in **System Settings**
- **Related Locations** checkboxes on calendars have improved styling indicators when they are disabled
- Accessibility: Users can now star/unstar event types and organizations in the event form using keyboard navigation
- Accessibility: Users are now able to tab to boolean yes/no toggles in the event form
- System now prevents username entries over 40 characters
- Accessibility: Restored keyboard access to event form dropdown menus
- Double-clicking a cell on an **Availability Grid** or **Calendar** no longer opens multiple event forms
- Fixed issues that would cause a loading error in the Event Form when an image custom attribute was added to the event
- Accessibility: Color contrast improvements made to **Delete/Remove** buttons when **Dark Mode** is enabled
- Restored the ability to edit the **Work Email** field when copying a contact
- Users are now able to create three tiers of folders in **Event Type Hierarchy**
- When adding an additional **Inventory** row to a resource, the **Save** button is restored after a "Start date must be after the end date" error has been thrown and corrected
- **Document Reservation Formattable Date** variable examples now populate in **Document Management**
- **Copy** button added to the **Event Form Settings > Rule Settings** table

- Grammar correction made to the success message that populates when copying folders
- Removed "https://" from the "{{ \$pro.vars.eventURL }}" variable in template/document editors
- Restored the ability to update the ad hoc cabinet/folder date constraints
- When copying **Event Save Email** templates, the original version is no longer unintentionally saved as a new item
- Fixed issue where **Event Save Email** variables could cause unexpected errors when emails are sent
- The **Default Config** toggle in the **Event Form Config Settings** can no longer be changed from Yes to No. Instead, users must update another configuration to be the default by switching the new configuration's toggle from No to Yes
- Improvements made to handling deprecated items in the **Event Form** configurations
- Corrected issue where the **Copy Folder** button would initially be unclickable when the originating cabinet was selected from the 'Select Cabinet Type for Copied Folder' dropdown during the folder copy process.
- Restored the ability to set the **Default Event Type** for an **Event Form** configuration to **Not Visible**
- Fixed issue where occasionally **Event Form Config** items can appear below the "After Saving This Event" section on the event form
