

03/23/2023 – X25 Analytics

Last Modified on 04/27/2023 3:40 pm PDT

- Users can now save, edit, and copy [Comparison Sets](#). System administrators also have access to delete existing Comparison Sets
 - The Critical Time Usage chartlet now shows organizations with the greatest critical percentage (rather than the greatest Z-score)
 - Removed temporary event/location searches that users see when creating a search-based snapshot in X25 Analytics
 - A summary row has been added to the bottom of the events and locations tables. This row includes totals, averages, or counts of each column, depending on the corresponding data
 - *Other Fixes and Improvements:*
 - The [Non-Compliant Meeting Patterns](#) report in Section Analytics now includes meeting pattern information
 - Improved calculation consistency for the following event table values: Average Duration, Average Seat Utilization (Events), Average Seat Utilization (Locations), Area Per Station (Locations), Average Compliance (Locations)
 - Corrected issue where the Tables view may display incorrect start and end dates.
 - Fixed issue where grouping the [Locations By Time](#) report by Individual Locations will cause the report to fail to load if any locations pulled by the location search for that snapshot have a name that has a number, a space, and then an open parenthesis (ie, "1 (").
 - Restored functionality to populate the following fields when generating a list using the Modeling Optimizer: First Date, Last Date, Start Time, End Time
 - Added a heading that indicates the name of the selected run to the Optimizer window and made other minor styling updates
 - *Accessibility Improvements:*
 - Converted the Features and Benefits graphic in unlicensed instances to text
 - Navigation sequence improvements made to the Add Run form fields in the Optimizer
 - Keyboard access improvements made to the Prepare step in the Optimizer
 - Keyboard navigation improvements made when users select and reselect a project/snapshot
-
