05/18/2023 - X25 Analytics

Last Modified on 05/18/2023 10:43 am PDT

- When viewing snapshot data as an events table, there is a **new** column showing whether an event is part of a bound set (and, if so, whether it is primary or secondary)

- Comparison Sets **now have** a "Save as Default" option for Target Sets

- Changed the behavior of the "Sum Headcount" checkbox in Data Filters to now adjust the headcount of every reservation to the summed value, similar to the LYNX Interface behavior

- The count values now display along with the percentages when viewing specific Comparison Sets metrics

- When using X25 Analytics Target Sets, ensured updated descriptions save when changing field focus

- Language improvements to on-screen text and labels in exported spreadsheets

- UI updates for Comparison Sets

- Fixed "skip" link used by screen readers in snapshot views

- Ensured events with midnight start times display properly

- Added accessible names to more elements and fields as well as improved labeling throughout the application for screen readers

- Better keyboard access for scrollable regions
