

11/02/2023 – Group Administration

Last Modified on 11/02/2023 4:43 pm PDT

- When configuring location security settings for multiple groups, after selecting locations from the list, users are now able to switch tabs and retain their current selections
 - A scrollbar has been added to the Event Security "Additional Filter Options" pop-up to ensure that all options are visible
 - If an Organization has no title defined, the Formal Name field will no longer appear in the pop-up screen after using the Info button for the organization
 - When editing event security, the Child Folders "Select Security Type..." dropdown no longer appears too narrow, cutting off the selections' text
 - Corrected issue where—when editing Organization Security—the first few lines of organizations could be blank, causing users to need to scroll down in a list to make organization selections
 - Restored the display that shows the list of selected objects when editing Object Security or Assignment policy
-
