04/25/2024 - 25Live

- New - A single Event Form Rule can now have multiple targets

- New - Organizations can now be selected as targets in Event Form Rules

- *Other Fixes and Improvements:*

  - Styling updates have been applied to the Create Rate Schedule form

  - Styling updates have been applied to System Settings > Pricing Settings > Rate Group

  - Fixed issue where using some Event Save Email string replacement variables could fail due to unescaped quote characters

  - Availability Weekly grids now allow users to view up to 20 weeks at a time

  - The More icon no longer flips to the left side of the page when masquerading in smaller browser widths

  - Fixed issue where special characters would not be properly escaped when pulled into Document Management through the `$pro.vars.expectedCount` and `$pro.vars.registeredCount` variables

  - Updates to organizations no longer fail when adding three or more partition preferences at once

  - Fixed issue where selecting a saved search, toggling to Advanced, and clicking the Search button would throw an error message

  - When adding a resource to an event using an Event Form Rule, users can now choose the quantity of the resource to add

  - Event Form Rules that have a boolean custom attribute source and a contact target are no longer erroneously triggered when opening the event form

  - Dashboard locations no longer have an edit icon next to locations that cannot be requested by the user

  - Restored the quantity value display for resources in the event form

  - Accessibility: Color contrast improvements have been applied to task comments

  - Accessibility: The drag and drop functionality in System Settings > Pricing Settings > Rate Groups is now keyboard accessible

- Patch 04/29/2024

  - Adjusted the Rate Group table sort order in System Settings > Pricing Settings. Now if there are multiples of same rate group, items will be ordered by effective date descending
