

05/16/2024 – 25Live

- New – 25Live now includes allows [payment processing through Stripe](#)
- New – Advanced searching now includes the option to search for events by [meeting pattern](#)
- New – Users can now schedule emails from the [More Actions menu](#) of Event Details pages, as well as from the [Event Save Emails](#) section of System Settings
- New – Event [audit trails](#) now include the content of emails sent from events
- New – [Five additional Document Scope options](#) are available in Document Management, giving users even more options for easy document creation
 - Event Listing – Excel, Reservations by Date – Excel, Location Listing – Excel, Resource Listing – Excel, & Organization Listing – Excel
- *Additional Fixes and Improvements:*
 - Primary organizations, additional organizations, and resources are now added to events when Event Form Rules are applicable—even when those form fields are hidden
 - Fixed issue where the Pricing tab could encounter a loading issue if a user clicked on the event from the results of a pre-existing search after having recently visited the same Pricing tab
 - The Create Type button has been removed from the editing page of Master Definitions > Event Types
 - Event Form Rules no longer unexpectedly change the quantity of resources that are already assigned
 - Pricing tab tables now include an Outstanding Balance column
 - Corrected the permissions required to see the "Cancel Request" task button
 - Event Save Email scenarios with no "Trigger Template Actions" options selected will no longer unexpectedly send emails that should trigger for "All Notification Policy Approvals Complete"
 - Clicking the caret icon to update the Additional Contact field on Event Details pages will no longer remove the field
 - Users can now select specific days of the week as the Event Details property in the Event Form Rules
 - Task action buttons now consistently display on a single line
 - Credit Account code and Debit Account code fields have had their character limits increase from 20 characters to 60 in System Settings > Pricing Settings
 - Fixed issue where printing the default invoice from an event would result in a blank report if the invoice was being pulled from Document Management
 - Color consistency improvements have been made to availability views when users enable Dark Mode
 - Fixed issue where overlapping events could be hidden when viewing availability grids from mobile devices
 - Improvements made so that approving/assigning tasks in quick succession doesn't populate an error message
- Patch 05/17/2024
 - Removed the warning that would pop up when a resource that the user did not have object security rights to see was automatically added to the event form by an Event Form Rule, while using a form that did not have resources configured to visible

- When adding a scheduled email to an event, the Schedule Email information no longer stays at the bottom of the event page when switching to other tabs
 - Patch 05/20/2024
 - Increased the default width of the Respond By column in the task search results
 - Fixed issue where, occasionally, the primary organization could disappear from the event form upon editing an existing event
 - Fixed issue where the rate schedule error "Please enter a formula expression" could prevent the save of unrelated price sheets
-
