

## 06/06/2024 - 25Live

- New [event bulk editing](#) action option to move events between folders for System Administrators (in the -1 group)
  - Ability added to change the username of a 25Live user in the [Contact Details view](#) using [inline editing](#) for System Administrators (in the -1 group)
  - Added academic [search criteria](#) to look for meeting pattern and standard schedule compliance (events/courses that don't match the meeting patterns of a standard schedule)
  - Improvements for [Event Form Rules](#), including:
    - Additional "not in" operator added to Event Form Rules for sources
    - Ability to disable rules with a toggle button
  - *Additional Fixes and Improvements*
    - Added "Multi-valued" checkbox in *System Settings > [Master Definitions > Custom Attributes](#)* to allow selection of multiple values on the Event Form or in the [Event Details view](#)
    - Phone Number field added when creating a contact ad hoc within the [Event Form](#)
    - When creating a [pricing set](#), improved selection of only Requirements to not include occurrence information
    - A confirmation success message is displayed when a [new contact is created](#)
    - Ensured available patterns display properly in *System Settings > [General Settings > Grid Coloring](#)*
    - Resolved console log error when editing custom attributes
    - Improvements to [Document Management](#) previews
    - Work on upcoming additional integration with 7 Point Solutions
    - More efficient background services when loading [task](#) lists
    - More adaptable table column sizing in styles throughout the application
  - *Week of 06/17/2024 Patch:*
    - Added audit trail item (viewed from [Event Details](#)) to log when event ownership is changed (based on [Feature upvote request](#))
    - Added functionality to catch sending to bad email addresses (typos, test emails to addresses that don't exist)
-
