

06/27/2024 – 25Live

Note: Feature Upvote Works!

Many of the issues in this release, as well as improvements in other Series25 applications, are based on your customer requests on the Series25 Feature Upvote site.

[Learn About Using Series25 Feature Upvote Customer Feedback Boards](#)

- Users can bulk edit from [search results](#) without having to first save a search
- [Event Form Rule](#) improvements, including:
 - New option to type a custom value when using the "contains" operator with a custom attribute trigger
 - Added "Layout" as a source under "Location"
 - Ensured reliability of the option to select multiple values when using a multi-select custom attribute as a target
 - Now public searches can be selected as a source for locations, resources, and organizations under a rule
- Two new fields, "Due Date" and "Payment Status," added to [managing payments](#) as well as a new "Mark as Paid" button
- A "Select Standard Schedule Patterns" dropdown is now available as criteria when doing an advanced search within [Meeting Patterns](#)
- [Buildings](#) were added as a new location search filter in the Event Form
- New option in *System Settings* > [User Activity](#) to checkmark specific locked items or pending reservations for removal as well as a new "Hide Viewer Seat" checkbox
- Added a new [Document Management template variable](#) () for event scoped documents, Related Event Custom Attributes table
- New [bulk editing](#) option when changing ownership of event(s) to choose from other roles
- Access to [Manage Payment](#) functionality can now be controlled by two [new permissions in the Series25 Group Administration tool](#), and payment activity by users has been added to the payment History table
