

07/17/2024 – 25Live

- The event [audit trail](#) now tracks event relationship changes
- Users in instances that have [StandOut Classroom](#) enabled will now be automatically authenticated when they click the StandOut Classroom link in the More menu
- Users can now add [System Tags](#) to location features and manual email templates
- Default layout capacity information is now listed in parenthesis beside the location name in location availability grids
- Fixed issue where users without view access to a Document Scope report could select the scope from the dropdown
- A new Invoice To column on the standard pricing occurrence view of the Pricing tab shows which invoice each occurrence or line item is assigned to
- Various user interface updates have been made to event pricing tabs
- [Pricing sets](#) are now referred to as custom invoices
- Fixed issue where the Pricing tab's payment History sidebar was not showing the remaining balance and payment amount
- Pricing sets with logged payments are now prevented from being deleted
- Resolved issue where JReports could only be emailed in PDF format and not in other available output formats (Excel, HTML, etc)
- The appropriate Email Event recipient boxes are now auto-filled when a user has selected a template that has associated event roles

Patch 07/30/2024

- Improvements made to permission requirements that hid the Primary Organization dropdown in the event form for user groups restricted to one organization
- Event forms no longer remove an event scheduler that was added by an event form rule after a user makes an edit to another form field
- Restored the correct behavior when adding the word "scheduler" to a manual email template
- Fixed issue where users without object security access to reports could not trigger Event Save Emails that had those reports attached
