10/10/2024 - 25Live

- New - Document Management now has a Invoice (Payment) document scope option, which includes new template variable options

- New - The Event Form Rules target Min Additional Time allows users to automatically add Setup, Pre, Post, and Takedown time to en event based on other event criteria

- New - The Event Form and Event Details pages now recognize Custom Attributes and Requirements that have URLs in their names and generate clickable links for those items

- *Other Fixes and Improvements:*
  - Several Event Pricing tabs improvements have been added:
    - Users can now toggle between a Standard view and Payment view
    - Users will now generate invoices and view past invoice activity from the new Invoice Activity view
    - Payment Processor and Attach Invoice options have been added to the Send Payment Request view
    - In addition to Stripe, user can now choose to use manual payment processing when sending payment requests
    - Occurrences can now only be assigned to one invoice/pricing set
    - If no default invoice is available on event Pricing tabs, printing will be disabled
    - Corrected issue where checking the Hide No-Charge Items box on a Pricing tab would not hide all $0 items
  - Fixed issue where starred locations could still be visible on a user's dashboard after they had lost access rights to those locations
  - Updated the Disable Rules setting in the Event Form Config to include Validation Rules
  - Instructions are no longer omitted from Document Management reports that used the Reservation by Date - Excel scope
  - Restored the "[Not active]" message that is appended to inactive folder and cabinet names
  - Reduced the event editing permissions needed for users to generate invoices
  - Fixed issue where users could not choose where to route an event in the event form if a validation rule was setup to push an alert message
  - Removed the Done button from the Related Spaces and Related Resources dropdown menus in the location and resource details
  - Added a Tags column to the Event Save Email Template Settings table
  - Fixed issue where the opening the Custom Attribute modal in the event form would unexpectedly move the user's view to the top of the form
  - If a resource is added to an event automatically due to an Event Form Rule, the Included checkbox will now be greyed out
  - Fixed issue where, in rare occurrences, an event that a user had rights to view could be hidden from their availability views
  - Updated the Accessibility and Privacy Policy links in the 25Live More menu

- Fixed issue where adding occurrences to an event in quick succession could bypass the conflict checker

- Restored the ability to use a Time of Day source in the Event Form Rules without a Between operator

- *Patch 10/14/2024*
    - Invoice report labels in System Settings > Master Definitions > Event Types > List View now include " (Standard)" to match other invoice labels in 25Live

    - Fixed issue where event Pricing could stop working correctly if a user quickly moved into a Pricing tab and then to another event tab

    - Restored the option to create a new manual payment on invoices that have no payment history in Payment Mode

- *Patch 10/17/2024*
    - Fixed bug that could cause an endless save loop in cases where users don't have the rights to update the event state but a [validation Event Form Rule](#) is trying to make a change to the state

    - Fixed issue where adding occurrences to a draft in quick succession could bypass the conflict checker for all but the last occurrence added

    - Fixed issue where users could see an error alert when adding or editing an adjustment in the occurrence view
