

## 10/17/2024 – X25 Analytics

- The Generate Lists output in Modeling now displays "N/A" in the Feature Match column if a section has no feature preference
  - When sorting table columns, blank cells are now sorted to the bottom instead of to the top
  - Modeling and the Event table can now be sorted by Partition Match and Feature Match
  - The Generate Lists output in Modeling and the Event table now include Instructors columns
  - The Event table now includes a Binding column
  - Fixed back-to-back binding in Modeling that occasionally leaves a section out of a bound group
  - Users can now sort bound sections together in the Modeling Binding column
  - Updated the Traffic Map Building Address Modal to only show the event count for the dates selected, rather than the event count for the entire snapshot
  - When selecting a filter in Data Filters using the search box, the pencil tool no longer obscures typed text
  - Keyboard focus has been disabled in X25 Analytics for users without a full license
  - Using a text box, users can now specify an exact time to set the Traffic Map histogram to
  - Users can now choose to interact with the Traffic Map histogram by clicking-and-dragging or by hovering
  - Improved sorting added to the Partition Match column in Modeling > Generate List
  - Fixed issue in the Traffic Map report where the Simulate button could be disabled if null locations are returned
  - Accessibility: Screen reader improvements made to the warnings on the Data Filters page that are triggered when users enter invalid values in text boxes
-
