

10/21/2024 – Group Administration Patch

- Fixed bug that could prevent child permissions from being updated when a parent permission is set to "No" under Configuration > Settings
 - Improvements made to prevent system security groups (viewer25, object25, and service25) from being edited
 - Fixed issue where click on the name and description of a setting #3 in Configuration > Event Form Presentation unexpectedly updated the answer to setting #1
-
