11/21/2024 - 25Live

- New - The ability to add Tags is now available for Custom Attributes and event contact Roles
- New - An Order column has been added to the Features, Layouts, Partitions, Org Types, and Org Ratings tables in System Settings > Master Definitions
- New - User sessions are now grouped by username and display a web session count in System Settings > User Activity > Signed-in Users
- New - Document Management scope available: Invoice (Payment) - Excel
- *Other Fixes and Improvements:*
  - Adjusted capitalization consistency for instances of the "(Private)" label
  - Fixed issue where locations with Additional Time on their layout could unexpectedly cause an event to fall outside of a date range Assignment Policy Exception
  - The Availability Weekly view is no longer compacted in older browser versions
  - Instances with no rate groups or tax schedules in System Settings > Pricing Settings > Pricing Set-Ups no longer get an alert when accessing those settings
  - Opening an event for editing that has requirements longer auto-removes the checkmark from Requirement boxes
  - Users without permissions to view a type of object no longer see a blank page when they navigate to that object's search page via URL
  - Fixed issue where users without permissions to see descriptions, comments, and confirmation text could not see the Additional Time section of the event Occurrences tab
  - Restored the List Price value in Pricing > Occurrence View > Adjustments modal
  - Fixed issue where (in special circumstances) selecting multiple occurrences in the event form could cause a background error that prevented saving
  - Added the ability to export search results from the Task Search page
  - Fixed issue were saving could fail after tagging two master definitions with the same object type and object type id
  - The Recommended Resources/Locations section of the event form can now be filtered by column
  - When a user edits an event where the Additional Time Event Form Rule had been applied, but no longer applies, the Additional Time added by the rule is removed
  - Fixed issue where users creating Advanced searches with the custom attribute criterion selected but no specific attribute chosen could receive an infinite loading wheel after moving to the Quick search
  - Fixed issue where (in special cases) a required custom attribute that was triggered through an Event Form Rule, based on another required custom attribute could be skipped on an event form
  - Restored functionality of the Blackout Management refresh button
  - Alert added when there is no From email address added to a payment request in Pricing
  - Improved messaging added to Pricing > Payments when a payment request is being made for a type that has already been generated

- The Send Request button in Pricing > Payments now switches to read Send Reminder once a payment type has been recorded
- Fixed issue where Event Form Rules weren't untriggered if the rule was based on a headcount value that was added, deleted, and left blank
- Accessibility: Added accessible labels to the Flagged checkboxes on the Task List
- Accessibility: Added unique labels to some event form elements to improve keyboard accessibility
- Accessibility: Improvements made to the Find Available Location widget on the dashboard
- Accessibility: Improvements made to the focus on errors on the event form that populate after pressing Save
- Accessibility: Accessible label added to Notifications
