

12/12/2024 – X25 Analytics

- [Custom look settings \(logo, colors\) from 25Live](#) will now apply in X25
 - When transforming a meeting pattern of a section within [Modeling](#), users can now specify the start date of the new meeting pattern and additional options
 - When a user deletes a [project](#), they will now need to confirm the deletion in an extra step to prevent data loss
 - [Treemap view](#) improvements:
 - Added an Instructors column
 - Made sure data populates in the First Date, Last Date, Start Time, and End Time columns when generating a list from the Events Treemap view
 - New Binding column added to the Generate List output
 - Ensures all column headings display correctly
 - Data filters are now preserved when [snapshots](#) are updated
 - Changed default range for the Expected Critical Percentage in [Data Filters](#) to 40% - 60% in new instances
 - Improved Meeting Patterns so calculations in Treemaps and Modeling no longer include single occurrences added later to a section, and they will not affect downstream transforms
 - Modeling now is consistent with the [Optimizer](#) when placing occurrences that deviate from a standard meeting pattern for a section
 - Back-to-back binding transforms in Modeling now support multiple bindings
 - *12/16/2024 Patch* -
 - Eliminated “Resource could not be found” message during X25 maintenance
 - Fixed menu display issue in Treemaps views
-
