02/13/2025 - X25 Analytics

- Users can now save simulation runs in Modeling, helping them easily and quickly compare runs with different settings or transforms
- New "Show Values" option when viewing a bar chart horizontally
- A "Fit to Page" display setting has been added that allows users to see the full body of reports on the page without scrolling
- Time-based data filter options are now reflected on the Schedule Distribution report
- The Traffic Map now prioritizes longitude and latitude, helping ensure that multi-building complexes with the same address are reflected accurately
- Imports in X25 Analytics can overwrite the latitude/longitude for buildings in 25Live, making X25 the best option for those updates
- When using the Locations by Time report fixed issue displaying some content at 200% zoom
- Resolved error when retrieving Section Analytics data
- *02/20/2025 Patch-*
    - Resolved issues with Optimizer availability settings
    - Ensured Expected Headcount is not still used when unchecked
    - Fixed problem deleting old data
