

03/27/2025 – 25Live

- New – A read-only version of the Academic Grid is now available in all 25Live instances. This schedule-only [Meeting Pattern Grid](#) grid can be used to review the times and meeting patterns of sections. Be sure to enable Academic Options: 6.0 *Access to Academic Grids* to use the the new mode.
- *Other Fixes and Improvements:*
 - [System Tags](#) in the Master Definitions now link to their associated Group Administration security pages.
 - Email template > Table Builder > Occurrences has three new table options: Segment Expected, Segment Registered, and Segment Comments.
 - The NOT IN operator is no longer behaving like the IN operator when using Location + Layout rules.
 - The Location Formal Name field is now wider for better text visibility.
 - Restored the ability to create a new event from the last half hour section of an [availability weekly view](#).
 - The Event Form Rule form now includes a Description field for adding comments.
 - The Event Save Email scenario from now include a Description field for adding comments.
 - Each template in Document Management > [Templates](#) now includes a Sample button, allowing users to preview the template.
 - Users can now use repeating patterns when copying segments to extending events.
 - The Do Not Include operator no longer reverts to the Include All operator when saving an advanced search that uses the Standard Schedules criteria.
 - Improvements made to pricing calculations for related events.
 - 25Live Pricing now prevents users from using both [Freshbooks](#) and [native payment requests](#) on a single event.
 - Fixed issues that prevented users from successfully running the Event Type List report from the Master Definitions.
 - User interface improvements added to System Tags sections in 25Live and Group Administration.
 - Restored correct resource mapping behavior when editing a multi-occurrence event and choosing One by One or Date by Date .
 - The label on the Allow Silent Save toggle in Event Form Settings > Config Settings > Edit has been updated to clarify its purpose.
- *Occurrences and segments fixes and improvements:*
 - Restored Cancel button functionality when inline editing occurrence dates.
 - Removing multiple objects too quickly via occurrence inline editing no longer throws an alert message.
 - The Additional Time slider no longer appears clickable when hovering with a cursor.
 - Fixed various issues with the Additional Time slider displaying incorrect times and block colors.
 - Resolved edge case issues where [segments](#) with matching dates could encounter copy issues and occurrences could be added unexpectedly.
