

04/17/2025 – 25Live

- Improvements in the [Event Details view](#) for inline [editing of occurrences](#):
 - Created new "Merged" and "Separated" views for better visibility in segment management and improved labels ([What are event segments?](#))
 - When adding a new segment, there are new abilities to optionally add locations and resources for new segments, as well as multiple occurrences and repeating patterns
 - Ensured *Occurrences > Filter By Location* and *Filter By Resource* correctly exclude occurrences from the list when activated
 - If your institution also uses [CollegeNET Admit as a CRM tool](#), 25Live can now link to your instance using the *More Menu > Go To Tool* to manage registrants for events
 - To learn more about Admit, contact your Account Manager (series25implementation@collegenet.com)
 - Institutions that use StandOut Classroom ([learn more](#)) can now link to live chat in that application from the *More Menu > Go To Tool*
 - *Additional Improvements and Fixes*
 - Users can change all the segment dates/times (rather than only the start date/time) when copying a segmented event, and remove occurrences from the copy
 - In the [Organization Details view](#), contact roles are now able to be clicked/tapped to change roles
 - Added ability for you to sort using the "Name" column in [Master Definition](#) table views and save the sort order
 - Updated the default landing page with instructions if a user mistypes their 25Live instance URL
 - Better application styling for mobile devices, and improved responsive design in Event Details views when editing occurrences to adapt better to different device widths
 - Fixed issue where [payment mode](#) was incorrectly triggered for pricing instead of totals from services
 - Addressed spontaneous view refresh when editing [an event's additional time](#), which then lost the changes to the edited times
 - Prevented [scenarios](#) with task actions from sometimes being triggered when there are no event tasks
-
