

05/08/2025 – 25Live

- Users can now select Has Invoices and Has Outstanding Payments search criteria are when running an organization search.
- Event Form Rules now include an Additional Organizations source option.
- Users can now edit schedule-only meeting pattern grids.
- *Additional Fixes and Improvements:*
 - Fixed issue where users could not select an "= Yes/No" option when adding some custom attributes to Event Form Rules.
 - Embedded content previews now show a more accurate representation of the end result.
 - The Add Locations and Add Resources buttons are now hidden from occurrence inline editing for users with insufficient search permissions.
 - Navigating to a location calendar via the URL no longer results in the Related Locations checkbox being grayed out.
 - Event Form Presentation settings are now more consistently applied when users inline edit occurrences.
 - Maximum character limit on event file uploads are now better enforced when file names exceed 112 characters.
 - When selecting a search value for an Event Form Rule, the dropdown label now indicates that the user will need to select a public search.
 - The Cancel button functionality has been restored for the Additional Time section of the Occurrences tab for users that are inline editing segments.
 - Fixed issue where, in special cases, deleting a row from the Inventory section of a Resource Details page could fail and create a new, duplicated row.
 - Additional operators have been added to Event Save Email criteria for some scenario criteria.
 - Three new settings have been added to System Settings > User Defaults, allowing users to control whether the Display Additional Time, Show Blackouts, and Related Locations options are checked by default on 25Live calendars.
 - Additional operators have been added to Event Form Rules for some sources.
 - Session IDs are no longer visible in the Edit Config modal under System Settings > Embedding.
 - The sort order of event requirements is now respected when requirements are added to events via an Event Form Rules.
 - The cursor icon has been updated from an arrow to a pointer when hovering over organization names in search results.
 - Restored correct styling of the Additional Time icon.
 - Users now have the ability to share schedule-only grids.
 - A map has been added to schedule-only grids, which indicates where the user is and where meeting blocks are on the grid.
 - Fixed issue where occurrences could be missing from a new event if it was copied from another event that

had multiple overlapping occurrences.

- The Filter by Location/Resource options now auto update when locations and resources are removed from all occurrences.
 - A new Remove Contacts By Roles action has been added to the organization bulk editing options.
 - Hiding a location before hiding a resource no longer reverts the location to visible when deselecting objects on the Filter by Location/Resource section of the event occurrence view.
 - Restored the date label in the View More modal when viewing all calendar events on a single date.
 - Fixed issue where report shells that display under Event Type > Reports would be event reports rather than reports that were for the respective object type.
 - Users with only the rights to view abridged categories can no longer see categories that are outside of the abridged list when viewing event search results.
 - Fixed issue where deselecting a location or resource from the Filter by Location/Resource panel in an occurrence view would not remove items from view if they were only attached to one occurrence.
-
