

## 05/29/2025 – 25Live

- [Payments and Invoicing](#):
  - New options to choose a date range or "Select from Occurrence List" to display on an invoice
  - Added ability to create a blank invoice
  - Now allowing users to move occurrences to different invoices for better flexibility
- [Academic schedule-only Meeting Pattern Grid improvements](#):
  - There's a new configuration setting to allow or prevent changes, controlling whether the grid is view only or editable
  - Users are able to specify a standard schedule that the grid will load with by default
  - Resolved error when moving a section to a different meeting pattern then back again
  - Better aligning of the start time for a schedule with the duration when changing schedules
  - Now hiding empty rows that do not have any sections for the selected meeting patterns (unless the section occurs during hours not shown on the grid)
  - Instructors are now sorted by last name and displayed in last name, first name order
- There are now "Select All" and "Unselect All" options for all [master definition](#) checkbox columns
- New [event form configuration](#) option to have the section for adding additional time expanded by default
- [Improvements to inline editing of event occurrences](#):
  - Now displaying location capacity and attendance
  - Improved the function of "Expand All"/"Collapse All" actions within the Merged View
  - When uploading events using the CSV import method, fixed location layout option that was missing for these events
  - Improved display of information when adding additional time causes a conflict and subsequently shows an error message
  - Ensured occurrences below are not erroneously hidden after making a change to an occurrence above then collapsing its section
- Users are now able to enter 40 characters into a title field for a [Contact](#) (versus the previous limit of 20 characters)
- Made display of object instructions (event, location, resource, etc.) consistent between different modes
- Tightened security to ensure contact names do not appear as a part of [search results](#) if a user doesn't have access to contacts
- Removed border in an [Event Save Email](#) when no event details are included
- Upgraded background code to newer methods, and added better data caching for events to speed application performance
- [06/02 - 06/03 Patches](#):
  - Fixed issue with More menu missing the "Product Feedback" and "Edit Viewer Message" links
  - Addressed pricing error for "Cannot read properties or undefined" when masquerading as another user

- Fixed bulk editing of organization categories where adding or removing categories showed a prolonged loading indicator
  - Removed "checked=true" message that erroneously appeared when creating an event form rule
  - Resolved background errors seen in some instances
-
