

## 07/03/2025 – X25 Analytics

- Small clarity improvement made to the message on the Model landing page that displays when no simulations have been created.
  - Users can now embed the Locations By Time report [into their websites](#).
  - The "UNFILTERED" data filter now appears in Metrics dropdown lists regardless of whether custom data filters have been created.
  - Fixed issue where Data Filter date selection fields would save the date one day prior to the user's selected date.
  - The Location column of the Optimizer is now able to sort locations when all location names are numeric.
  - Usability improvements have been made to the Standard Schedules and Time Mapping custom creation options.
  - Similar to other reports, the Maxed Out Courses and Multi-Section Courses reports in Section Analytics now link to their sub-data, rather than expanding/contracting to reveal the data.
  - Fixed issue where switching from a breakpoint "Group By" option to another option and then switching back would result in a mismatch between the Display Settings and the report content.
  - *07/11/2025 Patch* - Fixed issue where defining [Time Mappings](#) wasn't working properly
-
