07/09/2025 – 25Live

- Added a new Document Management report scope for reservations
- Opened access for all institutions to utilize other CollegeNET applications with 25Live via the *More* menu > *Go to Tool*
    - Any institutions (no additional licensing required) can now use the ApplyWeb CRM tool to manage registrants for events in greater detail using a new Series25 Group Administration permission (*7.0 Access to CRM Tool*)
    - Your institution can now use StandOut Classroom (with no additional licensing required) to link to live chat using new Series25 Group Administration permissions (*8.0 Access to Main Chat*, *8.1 Access to Event Chat*)
- Added an ability to edit Optimizer Meeting Pattern Grids, as it is available in Academic Grids
- Continued iteration and improvement to the ability to upload files for locations and organizations using the "URL/File" custom attribute (formerly "URL") to make it available in the Event Details view and Master Definitions
- *Additional Fixes and Improvements:*
    - Improved display of collapsing items within the Occurrence view in Event Details
    - Added a warning for users if copying an event occurrence with a conflict
    - Ensured that when copying an event, attached files via the "URL/File" custom attribute do not also copy
    - Fixed issue where the welcome message didn't appear after logging in via SSO
    - Resolved problem with a pricing rate schedule failing to save after deleting a missing formula, and fixed duplicate rate schedule display after changing a rate group
    - Restored the missing "Description" column in the document management table
    - Addressed a problem with a location that wasn't visible in the occurrence section of the Event Details view unless a user clicked on it
    - Fixed incorrect display of the inventory end date in the Resource Details view
    - Ensured Event Confirmation emails are sent reliably after intermittent failures in specific application instances
    - Fixed display issue that occurred when a contact had no first name
    - Masquerade now reliably shows all options when mapping to switch between users
    - Resolved issue adding an image type custom attribute
    - Upgraded background elements for better application performance
