07/31/2025 – 25Live

- Express Scheduling locations can now be hidden from standard event forms through Event Form Settings > Configs

- *Other Fixes and Improvements:*
  - When adding or editing location custom attributes through bulk editing, Float type custom attributes that have no value no longer display with the value "NaN" (not a number)
  - Event reference numbers are now auto populated in StandOut Classroom chats, next to their event name
  - Location details pages no longer endlessly load due to associated location categories
  - Color contrast improvement added to field description text on event details pages for better visibility in dark mode
  - Improvements added so that bound sections no longer cause conflict with one another when updating academic grids
  - Fixed issue where the location layout images would be cached incorrectly, resulting in the display of images from a location appearing on another location as users move from page to page
  - Error messaging has been improved in cases where a document in Document Management fails to generate
  - On academic grids, red conflict coloring is now reapplied after a section move is rejected due to a conflict
  - Hover behavior on academic grids that resulted in hover information displaying for incorrect items has been corrected
  - Fixed issue where X25 Analytics could be omitted from an instance's More > Go To Tools menu despite appropriate permissions
  - Background improvements added to speed up the display of saved search lists and results
  - When File type custom attributes are removed or updated, associated files are now also removed
  - Open modals are now auto-closed when a user is automatically logged out after a period of inactivity
  - The Document Management template variables dropdown called "Resources by ID" has been relabelled "Resources"
  - Background improvements have been added to more gracefully handle embedded form logins and prevent unnecessary pop-ups
  - Fixed issue where segment names were unexpectedly not displayed on Pricing tabs after an associated rate group was reconfigured
  - Files attached to events can now be previewed
  - For File type custom attributes, files are now properly removed when custom attributes are removed from objects using bulk editing
  - Events that repeat on the 11th, 12th, and 13th of the month now show the correct ordinal indicators on event details pages
  - Table builders in Document Management now display in read-only view for users that don't have the rights to edit Excel-scoped documents

- Improvements made to the redirect page that users land on after entering a 25Live URL for an instance that does not exist
