08/21/2025 – 25Live

- 25Live will now compare the browser timezone against the timezone in each user's User Preference configurations, and if the two timezones are mismatched, it will ask the user if they want to update their timezone
- A new Usage column in System Settings > Document Management > Subreports shows which report(s) are currently associated with each subreport
- *Other Fixes and Improvements*:
  - Fixed issue where the Copy, Add Locations, and Add Resources buttons became inactive when switching to the Segment View of a segmented event if the user had Not Visible permission on assigned objects
  - Resolved unexpected save error that could pop up when adding a new segment to an event using inline editing and selecting ad hoc pattern
  - In-progress events in the event form are no longer unexpectedly included in the list of events on the Your Upcoming Events dashboard widget
  - Fixed issue where, in special cases, users couldn't copy an Invoice Details (Payment)-scoped document
  - Corrected the warning message that pops up when a user deletes a To Do template to no longer indicate that an email template is being deleted
  - Fixed issue that could prevent embedded event forms from opening in a new tab
  - Simple styling changes have been applied to event Details tabs
  - Restored the pencil icon that allows users to create events from the embedded Availability Daily grid
  - Styling and display improvements have been applied to the event Create Invoice modal in event pricing
  - Backend changes made to correct an issue that occasionally made Always Open locations behave as if they were closed and vice versa
  - Events with multiple segments no longer show occurrences for one after editing the additional time on another
  - The Sort Order dropdown is no longer blank when creating a new occurrences-scoped document
  - When editing an occurrence from the Schedule tab of an event, any informational modal that has popped up when hovering over an object now disappears once a user begins dragging an occurrence to a new time
  - New rate schedules no longer silently fail to save in cases where a rate group has no associated pricing sheets
  - Styling and display improvements have been applied to the Occurrences-scoped document management reports and subreports
  - Fixed issue where events could be saved during closed and conflict hours in cases where the date was manually typed into the event date field instead of being selected via the date picker
  - Corrected inline event editing behavior to allow conflicts in shared locations.
  - Accessibility: Moving through the Go to Tools section of the 25Live More menu with a screen reader no longer erroneously sends users to Group Administration
  - Accessibility: When being read by a screen reader, the date selected in the event form date picker is now in a more user-friendly format

    - Accessibility: Improved the color contrast of the custom attribute buttons that display in the event form when dark mode is enabled
    - Accessibility: Added hover text to the icon, which indicates that an event can be opened in an event form

- *Patch 08/22/2025*
    - The dropdown values under Location Details > Express Scheduling > Maximum Event Duration are no longer blocked by the expand/collapse bar
    - "Undefined" no longer appears in some Location Details > Layouts fields when using dark mode
- *Patch 08/25/2025*
    - Restored sort ordering for the Location Details > Custom Attributes list
    - Fixed issue where quickly adding several ad hoc occurrences before selecting a location and saving would result in an endless save loop
    - Occurrences from related events are now successfully added to invoices in standard pricing mode
