09/11/2025 - 25Live

- Users can now email files attached to an event via the *More Actions > Email Event* option in the Event Details view (both those included as attached files or associated using a URL/File custom attribute type) (2025 CollegeNET User Conference Thunderdome session winner!)

- Chat navigation options are available now in the top navigation bar and Event Details views, with a visual indicator of unread chats

- *Document Management improvements:*
  - Changed "reservation" labels and titles to the more specific "occurrence" in Document Management views and objects
  - Added a "Description" field for payments in new Invoice Details (Payment) documents
  - New variables added for "primary_organization_admin_address" and "primary_organization_billing_address" for output directly or use in functions within Occurrences scope documents
  - Use of parentheses is now allowed as part of a string/text argument
  - Added invoice notes variable options within the Invoice (Payment) scope
  - New "organization_admin_address" (Primary Org Admin Address) and "organization_billing_address" (Primary Billing Address) variable options added

- *Additional Fixes and Improvements*
  - A new success message was added to verify completion after bulk editing the Event Type field
  - Limited the options for irrelevant meeting patterns when an Academic Grid is not editable
  - Invoice Activity headers now expand by default to show pricing details
  - Implemented faster loading times in Blackout Management Blackout Management
  - Improved the Availability Weekly view's display of overlapping and all-day events
  - Ensured custom attributes using long text values don't overflow their visual container
  - Resolved issue where notes on a manual payment were URL encoded (for example, including a "%20" for a space)
  - Fixed disappearing options in events using Edit mode after changing discrete custom attribute options
  - Addressed a display problem with location availability views not properly showing apart in the Separated view, and resolved a bug that required users to refresh their browser to see the changes between Separated and Overlapping modes
  - In the *System Settings > Master Definitions > Event Types > List View*, fixed the inconsistent display of "Select All" and "Deselect All" options
  - *Event Details* Schedule View fixes:
    - Removed erroneous "NaN" error that sometimes displayed after extending an occurrence time
    - An assignment permissions issue was resolved
    - Ensured occurrences can be moved when no locations or resources are assigned
    - Addressed an inconsistent occurrence copying issue

- Resolved problem where an event form was unable to save after adding locations and/or resources, then making additional updates quickly in succession

- Verified imported events can be paused from the LYNX tab in 25Live without an "Invalid instance associated with this user" error

- Removed extra zeros after the decimal in some Document Management output

- Ensured proper display of inline warning messages in the Location Details view

- Addressed problem with changes applied using Bulk Edit's "Remove Event Requirement" being reset

- Improved keyboard accessibility/shortcuts when opening 25Live in a new tab

- Fixed the inability to favorite/star items on the home dashboard view

- Verified data will always appear correctly when a user is moving quickly between items in a location's weekly availability grid view

- Successfully removed custom attributes from the view of users without proper permissions
