10/23/2025 – 25Live

- **Conflicting Requests Management**: You can now see and manage tasks associated with conflicting requests that are waiting for a location, and overlapping requests (if any) are indicated. In addition, users can see when a location has been previously requested

- Continued Document Management improvements:
  - The Occurrences By Date (Excel) report now includes the field, "Resource Instructions"
  - Improvements to Invoice Details (Payment) Excel, including better label names, 4 new parameters, and a new column option in the Summary worksheet
  - Improved the visual presentation and function of previewing in occurrence-based and invoice (payment)-based documents with radio button selectors. This improvement will also apply when printing these reports from Event Details
  - Added easier access to open a subreport in a new window for viewing or editing while you are editing an occurrence-based document
  - New templates for subreports for simple re-use in larger documents, with an initial selection of seven templates
  - *Did you know Document Management is a great way to create custom reports?*

- New ability to open availability grids to a specific date/range

- Added a new place to edit invoice names from the left sidebar menu within *Pricing > Pricing Mode > Payment*, and you can now also drag-and-drop to change the invoice display order in the sidebar

- Adjusted enforcement of the 80-character limit for the "Name" field in invoices

- Prevented an erroneous error that sometimes occurred when editing a system tag

- Improved error responses when failing to update a task

- Fixed duplicate event confirmation emails that were sometimes sent when an event's state was changed from Tentative to Confirmed

- Improved visual layout of the Associated Contacts section within Organization Details

- Resolved issue where a location's open/close hours were not displayed correctly in the daily availability view

- Better contrast in button color/text for improved accessibility

- *10/24/2025 Patch:*
  - Ensured the Task Calendar always displays as expected without empty blocks
  - Fixed an issue where the *Group Calendar By > Occurrence Date* view wasn't working as expected in the Task Calendar
  - Resolved display issue with overlapping tasks in the Manage Conflicts modal
  - Addressed the time attribute not showing sometimes when previewing an event form
  - Fixed an error that occurred when searching for an event locator using lowercase characters

- *11/04/2025 Patch:*
  - Ensured the location search calendar updates appropriately when a search is changed
  - Fixed issue loading calendars

- Ensured that *Event Form Rule > Source > Primary Organization > Organization Type, Organization Rating*, and *Organization Category* are available for selection and generate appropriate alerts
