

01/15/2026 – 25Live

- Users with sufficient rights can now export data from System Settings > General Settings > User Activity > Sign-In Users
- Contact searching now includes advanced search functionality
- Several new event save email criterion have been added including: registered headcount, occurrence date, relative date, day of week, and time of day
- *Other Fixes and Improvements:*
 - Events that are saved without an organization selected no longer display "(Private)" in the organization field
 - Users with native passwords no longer experience a password change when their active status is updated
 - Improvements have been made to event save email functionality to prevent the attachment of duplicate standard reports
 - Fixed an issue that caused the addition of categories to fail when inline editing events in cases where they were also removing a category
 - Improvements have been made to ensure that each document management file names are correctly formatted in audit trails and in emails
 - Additional location custom attribute variable options have been added to event save email functionality
 - Users limited to running quick searches no longer see the Advanced search toggle
 - Long category names no longer break and display in other columns when selecting categories in an advanced search
 - Fixed issue where pop ups in calendar views could unexpectedly show up blank
 - Additional time information now displays in the summary section of event pages summaries
 - Restored organization document attachment functionality in event save email
 - In cases where users with Not Visible permissions to a document trigger scenarios that have those documents attached, the email received no longer includes a blank attachment.
 - Chat labels throughout 25Live now include an icon
 - Minor UI updates made to the More Actions > Edit Event, Related Events, and Manage Bindings windows in event pages
 - Users can now edit events and update event states from pricing tabs
 - Selecting a time attribute from the advanced search and switching to a quick search no longer results in a time formatting variation that causes an error
 - When adding a pricing schedule, open AI chatbots now auto-close when the user closes the schedule
 - Fixed issue where users with the appropriate permissions could not update the **Availability Grid Includes Requests** setting in System Settings > [User Defaults](#)
 - Fixed issue where instances with Document Management confirmations set as their default confirmation attachment on an event save email could receive duplicate confirmations when an event save email was triggered

- A new modal in the event form offers users the option to adjust the additional time on an event in cases where a location layout's additional time is resulting in a conflict
 - Additional start date, end date, and pricing date options have been added to the [Invoice Details \(Payment\)](#) [\(Excel\)](#) options in Document Management
- *Patch 01/16/2026:*
 - The contact advanced search field "Name" has been relabelled to "Keyword"
 - Fixed issue where saving a payment due date to a future date would fail and revert to the today's date
 - Restored the quick search dashboard widget
 - *Patch 01/22/2026:*
 - Fixed Meeting Pattern Grid freezing issue that would prevent users from moving any section after they had already moved multiple sections to the UNASSIGNED row
 - Restored success messages in embedded forms.
 - Location and resource layout instructions are no longer omitted during an event copy
 - Restored summary data on events with no reservations
-
