

02/12/2026 – X25 Analytics

- All instances of *Profile Name* have been relabelled to *Segment Name* in X25 Analytics for improved consistency with 25Live
 - Fixed issue where x-axis labels may not appear on reports, such as Demand By Time and Locations By Time, if the entered time frame is set to an uncommon range
 - The [Schedule Distribution](#) report now has a *Combine Overlapping Bound* setting available
 - The [Section Analytics Overview](#) report now includes an *All Data* sheet in the Excel export that includes all columns
 - A setting has been added to [Modeling](#) that allows users to simulate the removal of location assignments from events outside of the lists selected in their simulation
 - *Total Meetings* and *Total Enrollment* values have been added to the [Schedule Distribution](#) report
 - Slight cursor movement off of a time block in the Schedule Distribution report no longer causes erroneous data to display in the right-hand panel
 - A new *Block Width* display setting can help with the visibility of smaller meeting pattern widths in data sets where there is a wide range of values
 - Fixed issue where saved changes made to one Data Filter could be applied to others
-
