

## 02/26/2026 – 25Live

- Optimizer [meeting pattern grids](#) for Workday, Banner, and Campus Solutions instances now have *Location Assignments Only* set as the default Edit setting (instead of *Location Assignment and Meeting Pattern*) to allow users to opt in to meeting pattern changes to the grid
- Fixed issue where an occurrence could be saved without a location in the event form if the occurrence landed on a date with a date exception
- Restored the Private message that displays in place of resource instructions for users who have Not Visible object security rights to said resource
- The *File Output* field in Document Management no longer adds variables incorrectly if the .pdf file extension is deleted by the user
- Users no longer encounter a "Something went wrong" error when loading an academic grid with an event search that includes an event profile with no reservations
- Fixed issue where group-specific welcome messages could pop up after the message's expiration date if said user hadn't logged in during the time frame that the message was set to trigger, or if a user hadn't logged in until after the message's expiration date
- [Event email scenarios](#) that targeted custom attributes with *Answered* and *Not Answered* operators have been updated to *Present* and *Not Present*, respectively (as custom attributes that are not answered can no longer be present on events)
- A new Boolean report parameter, *Hide Unused Buildings*, has been added to the Building Location Timeline report, which removes inactive buildings from the report
- *03/02/2026 Patch -*
  - Restored filter functionality of some pre-defined searches (such as the Your Starred Events search) that were returning event results that did not meet the search criteria
  - Fixed issue where—in rare cases—locations assigned to pre-assigned sections from the Optimizer meeting pattern grid would silently fail to move to the Optimizer, due to a backend error
  - Users no longer get a pop-up error when quickly moving from *System Settings > Event Types* to the List View and then immediately to a Cabinets view
  - Quick Search settings no longer disappear when navigating from the event form to the dashboard and using the Go to Search button
- *03/12/2026 Patch -*
  - Fixed an incorrect link that redirected when choosing *View As Search Results* in the Event Relationships section within [Event Details](#)
  - Accessibility fixes
- *03/17/2026 Patch -*
  - Fixed issue where data would not automatically populate on the pricing tab of a new event if that event was created while a user was viewing the pricing tab on another event
