

03/19/2026 – 25Live

- New AI Assist feature in [Pricing Settings > Rate Schedules](#) can give you suggested formulas based on your detailed descriptions
- [Waitlisting](#) can now be turned off for an entire instance, and authorized users can adjust *Allow Waitlist* settings within the [Location Details](#) view to not allow for that location or to allow requests only
- The [Academic Meeting Pattern Grid](#) feature now includes support for a view option for location assignment changes
- *Additional Fixes and Improvements*
 - Better loading performance when accessing the location search from within the [event form](#)
 - [Document Management](#) improvements:
 - The Occurrences by Date scope has the Primary Organization Account Code field available now
 - Added support for an optional Resource Search parameter for the Occurrences by Date scope
 - A new option allows authorized users to override a conflict when adding a layout with conflicting additional time within [inline occurrence editing](#)
 - Improved HTML/rich text editor across 25Live now supports [Dark Mode](#)
 - Ensured successful ability to add more than one Partition Preference at a time to an organization in the [Organization Details](#) view
 - Added improvement when two 25Live [forms are embedded](#) on a single, external webpage to not require a separate login for each form
 - Upon event [import](#), there's a new option to save conflicts as profile preferences
 - Fixed incorrect display of resource names in the [audit trail](#)
 - Resolved blank alert display in the [Event Form Rules Targets](#) list
 - Continued corrections for an incorrect link that redirected when choosing *View As Search Results* in the [Event Relationships](#) section within [Event Details](#)
 - Addressed problem with [bulk editing location](#) categories not updating correctly
 - Within [Advanced Search](#) for tasks, fixed erroneous return of all tasks in search results, and corrected a blank option when selecting custom attribute criteria
 - Ensured that in-progress search criteria you're typing don't disappear upon navigating to and from the search page or refreshing
 - Removed an unnecessary, extra alert that appeared when using the *"I know WHERE"* [quick search](#) option from the [home dashboard view](#)
 - Better support for keyboard navigation, such as using the spacebar to select an item, and improved scroll behavior when tabbing through available items
 - Resolved SSO failure with embedded content in Firefox browsers that occurred under specific circumstances
 - Additional [accessibility](#) improvements based on customer feedback and internal testing
- *Patch 03/24/2026*

- Refined the editing options on embedded academic grids
 - Inactive users are no longer unexpectedly set to Active when their contact page is visited
 - Contact pages of active users no longer show an unexpected "User status is now active" message when their contact page is visited
 - Backend improvements have been made to restore the ability to use certain special characters in searches without the search failing
 - When running several quick searches, past keywords are no longer retained if a user switches to the advanced search
 - *Patch 04/01/2026*
 - Made sure image Custom Attributes are available via Inline edit
 - Fixed issue closing the Draft conflicts modal
-
