

04/16/2026 – Series25 Group Administration & Chat

Series25 Group Administration

- Admins can now create, edit, and view [Assignment Policy Exceptions](#) for multiple security groups and locations at once
- In addition, there is a new ability to remove all Assignment Policy Exceptions across multiple security groups and locations or resources in a single bulk edit operation
- Fixed an error in [Event Security](#) where having a saved event search named "null" caused the Select Event Search dropdown to fail
- Addressed an issue where updating a date exception's start date to a value later than the current end date, before updating the end date, caused the start date change to fail to update
- Clarified messaging and tightened security when a user encounters an Assignment Policy that isn't set

Series25 Chat ([Chatting in Series25](#))

- Fixed a login error for Chat in test environments
 - Ensured the unread message indicator in a DM disappears after scrolling to the end of the conversation
 - Addressed a display issue where users with a blank first name appeared as an empty string
 - Updated DM email notifications to display a readable list of users in the channel title
 - Chat now distinguishes between Event-originated chats and Workflow-originated chats
 - When a user selects "Chat with Everyone" in a workflow, all workflow participants (submitter and reviewer) are now added to the channel
 - Users can now search for and add 25Live users to a channel or DM in both main and embedded chat
-
