

06/11/2026 – 25Live

- From an event page, authorized users can now open a chat with the event's Scheduler, Requestor, Instructor, or all users with contact roles on the event.
 - Users can now trigger Event Save Email scenarios when inline editing an event from the Details page.
 - *Other Fixes and Improvements:*
 - When importing/exporting is [paused](#) for a LYNX section in 25Live, its bound sections are now also paused.
 - The text box on Search pages now auto resize after running queries that expand the box.
 - Alphabetical sorting has been restored for the Security Group dropdown on Contact Details pages and the Security Group dropdown when users run the SeriesQL code "::securityGroup in" a Contacts Search.
 - Fixed issue where users with the appropriate rights to update their email signature could not see the Save button.
 - Users are now able to preview .txt and .rtf files that are attached to events 25Live.
 - When editing an ad hoc blackout, the date selector no longer jumps back to the start date after adding or removing a future date.
 - Opening the Select Features modal from the Features section of a location's Details page no longer erroneously sets all feature quantities to 1.
 - Fixed issue where file attachments added to events via inline editing could silently fail to attach if the file name was too long.
 - Restored the ability to save changes to [Invoice Details \(Payment\)](#) scoped Document Management documents.
 - Long file names in the Attached Files section of event Details pages no longer overflow the General section container.
 - Event pages no longer get stuck in a loading state after users try to access waitlisting without the rights to access the event.
 - Fixed issue where the Tasks by Location modal could incorrectly show "1st" in the Waitlist Order column for all rows.
 - Occurrence details now longer show waitlist features when waitlisting is turned off globally in System Settings > Workflow Settings > [Waitlisting](#).
 - Accessibility: Contrast and focus improvements have been applied to the AI chat Send button.
 - Accessibility: The Next and Previous buttons on event form date pickers now have accessible labels for screenreader users.
-
