06/25/2026 – 25Live

- Event Quotas
  - Event quotas now support a fixed date range option, allowing administrators to set static start and end dates for a quota period instead of relying on a rolling window
  - Quotas now include a "Future only (rolling)" option so that past reservations are no longer counted toward an organization's quota total
  - The quota configuration form has been redesigned for clarity, with updated language and the addition of an hours field alongside duration for easier setup
- The Location View of the academic meeting pattern grid now shows conflicts from events outside the current search or section filter, making it easier to spot scheduling conflicts and find available rooms
- The "Trigger Event Save Actions" button is now hidden from Event Details and occurrence inline edit views when no event save email scenarios are configured to run on inline edit, reducing clutter for instances that don't use that trigger
- "SIS Sync Paused" is now available as its own criterion in advanced event search, replacing the need to locate it under custom attribute criteria
- Several mobile app issues have been resolved: scroll lock at page boundaries, workflow task items overflowing the screen, dashboard widget configurations not persisting, and rich text editors not functioning on iOS. Haven't downloaded the mobile app yet? Get it for iOS (Android coming soon)
- *Additional Improvements and Fixes*
  - The location and resource search in the event form and occurrence inline editing have been updated to use the same mechanisms used elsewhere in 25Live
  - Fixed a waitlist issue where denying one segment of a multi-segment event caused a phantom waitlist icon to appear on other segments, with no way to dismiss it
  - Resolved a waitlist display problem where the waitlisting event shown was the event itself, and the location displayed was not associated with the event
  - Addressed unreadable black search bar text in the Publisher Overview page when Dark Mode is enabled
  - Ensured that selecting "Reset" in an advanced event search clears all criteria
- *07/06/2026 Patch:*
  - Fixed a problem where event form rules using "Recommended Resources" or "Recommended Locations" conditions stopped populating results in the search dropdown as expected
  - Resolved an issue in event form configurations where the "Hide Express Locations" setting was not filtering locations correctly for permissions
  - Addressed an unexpected sign-in prompt that appeared when navigating directly to an event's Occurrences tab while not signed in
  - Ensured that "Reserve Available" no longer displays in the event form for multi-occurrence events when a location conflict is actually a pending request rather than a true conflict
