09/10/2026 - 25Live LYNX Interface

- Workday integrations can now authenticate using OAuth; username and password sign-in is still available as a fallback for Workday customers who haven't configured OAuth
- A new "SIS Health" connectivity test lets administrators check whether LYNX can reach each configured SIS endpoint, with clear success or failure messages (only available for Ethos and Workday, with more SIS coming soon)
    - "SIS Health" also verifies SIS permissions, reporting which are granted, denied, or misconfigured
- System settings changes are tracked with a new "History" option showing who changed each preference, when, and the previous value
- CollegeNET staff can export configuration settings from one LYNX environment and import them into another using the new "Export Config" and "Import Config" options under *Configuration > Settings (contact for help)*
    -
        - Importing a production configuration into a test environment automatically sets "Academic Priority" to "No" to prevent test imports from triggering real AcadeQmic Priority emails
- Fixed "Profile does not exist" errors that appeared for exam headcount updates on existing, already-imported courses
- Resolved a performance issue in LYNX for Ethos that caused term initializations to take longer than expected
- Addressed an issue where "Conversion" or "Make-up" profiles could incorrectly be marked as the primary profile in a bound set
- Ensured the "Shared Locations" list on the location settings page sorts alphabetically
- *Patch 09/14/2027*
    - Fixed an issue where the "Apply configuration" button in Import Config did not activate when confirming a production instance name, preventing the settings import from completing
    - Resolved an error that occurred when applying an imported configuration to a prod-test instance instead of completing the import
- *Patch 09/22/2027*
    - Fixed an issue where active sections synced through an Ethos Banner integration could be incorrectly canceled in 25Live with no indication why
