09/17/2026 - X25 Analytics

- *Modeling improvements:*
  - The Modeling graph grays out and prompts you to re-simulate whenever a run's criteria have changed, so the results shown always match what was last simulated
  - Modeling prompts you to save or discard unsaved run settings before switching simulations or leaving the page
  - A confirmation appears before adding or deleting a simulation run that would clear existing placement results
- *Optimizer improvements:*
  - A new "Optimize" page houses the Prepare, Optimize, and Assign steps that previously launched in a modal, giving users more room to work and the ability to link directly to a specific run
  - The Optimizer "View/Edit Settings" page is renamed "Default Settings" to match its updated URL
  - The Optimizer "Manage Runs" page is streamlined and renamed "Select," now used only to edit, copy, and delete runs
- Schedule Distribution includes a new "See Overhanging Time" option, selected by default, that shows the true start and end times of sections extending beyond the data filter's time window, including on embedded views
- *Additional Fixes and Improvements*
  - "Export" on the Schedule Distribution report now downloads the same Events workbook used by the Events table, including every event in the current snapshot and filter rather than only the events shown in the sidebar
  - Occurrence, meeting hour, and contact hour totals on the Class/Event Placement by Room Capacity report and its Excel export are calculated from actual room placements, so a bound section placed in multiple rooms is counted correctly
  - The Metrics page loads all of its widgets in a single request, improving load times when changing project or filter
  - Fixed embedded Schedule Distribution reports so "See Overhanging Time" now expands the chart to true meeting times instead of staying clipped to the embed's configured window
  - Resolved an issue where turning on "Combine Overlapping Bound" summed headcount for overlapping bound events even when "Sum Bound Head Counts" was off in the data filter
  - Addressed a problem where Schedule Distribution chart totals could drop or miscount meetings and enrollment for events with more than one meeting pattern
  - Ensured standard schedule compliance coloring on Schedule Distribution reflects each section's true meeting times, even when the data filter trims the displayed start or end time
  - Made sure the Traffic Map "Edit Buildings" modal can be reopened after being closed with the ESC key
  - Corrected headcount totals on the following reports so that non-overlapping bound segments, such as makeups, conversions, and back-to-back sections, are no longer added to the "Sum Bound Head Counts" total:
    - Schedule Distribution

        - Location Usage
        - Locations by Time
        - Room vs. Seat Utilization
        - Treemaps
        - Comparison Set Summary View
        - and the Metrics page
    - Treemaps, Location Usage, and Comparison Set Summary View reports also now use each event's original start and end times to determine standard schedule compliance
    - Fixed a screen reader issue on the Optimizer Assign tab
- *09/28/2026 Patch:*
    - Resolved a mismatch in Optimizer run ownership for usernames made up entirely of numerals
