Coming Soon!

25Live

- **Pricing and invoicing in 25Live are getting a big simplification this Fall.**
  - The Standard Pricing and Payment Mode toggle is going away and will be replaced by two views for every event:
  - A Pricing Summary that always shows everything priced
  - A Standard Invoice generated for you
  - A new Invoice and Payments search page is coming, for searching invoices and payments in a table view
  - Learn more!
- Academic Grid improvements:
  - You'll be able to add and remove locations right from the hover info on a segment
  - The hover info will list every active warning on a section, not just the one reflected by its highlight color
- Calendar views will show configured special dates as all-day indicators
- A new field-level security setting will let admins control how much contact detail other users can see, beyond just names
- A new user setting will let people control who can see their own contact information

Connect25

Interested in learning more about Connect25? See the Connect25 product page, or contact your account manager.

- A visual drag-and-drop composer is coming for Connect25 emails and newsletters, with custom templates, branded layouts, and the ability to attach events for direct RSVP
- Engagement Reports will get an export option, so admins can download the current report, with any applied filters, to a spreadsheet
- You'll be able to upload a list of event registrants instead of relying on self check-in, including for events that have already passed
- Election Results will get an export option, with the ability to break results down by contact attributes, plus a new Election Analytics page for results across more than one election
- The Members page will add a Role History table showing position start and end dates
- Attendance and registration status exports will include a timestamp for each status a registrant passed through, not just their current one
- Event chat will link directly to the corresponding Connect25 event record, for users who don't have 25Live access
- Organization titles will display consistently on both the dashboard and the org details page
- A new field-level security setting will let admins control how much contact detail other users can see, beyond just names
