

Coming Soon!

25Live

- **Pricing and invoicing in 25Live are getting a big simplification this Fall.**
 - The Standard Pricing and Payment Mode toggle is going away and will be replaced by two views for every event:
 - A Pricing Summary that always shows everything priced
 - A Standard Invoice generated for you
- An upcoming improvement to how overlapping items display on the Academic Grid, and the grid will account for location relationships
- A new email variable for Event Save Email templates that will show only "Active" occurrences
- Added security options around event state changes as well as telemetry to inform whether a new permission is needed
- Admins will be able to bulk-create or update system definitions like categories, custom attributes, and event types from a spreadsheet, instead of entering them one at a time
- Event Quotas will support day-of-week limits, so schools can set different maximums for weekdays versus weekends, and they will include an option to check quotas per event rather than per reservation
- The Excel "Occurrences by Date" report will get new sorting, date range, and grouping options

Connect25

- You'll be able to upload a list of email recipients for bulk messaging in Connect25
 - Connect25 will support budget import and export, including per-org and bulk reporting
 - Organization pages in Connect25 will become customizable, with configurable layout and fields
 - Connect25 will add budget reporting, including budgets by org, over/under status, and fiscal-year exports
-
