10/08/2026 – 25Live

- *Academic Grid improvements:*
  - Locations related to an assigned room (except "Close To" relationships) are shaded and can't be dropped into on the Academic Grid, making related-location conflicts easier to see
  - Filtering both events and locations in the Academic Grid's "Location View" shows the union of matches instead of the intersection, so filtered sections and their assigned locations stay visible together
  - The "Unassigned" row in the "Location View" stays frozen alongside meeting pattern information, making it easier to find an open location for unassigned sections
  - Clicking or tapping a different item in an overlapping-items popover refreshes the modal with that item's details
  - Standard Schedule conflicts move to the bottom of the "Warnings" modal, reflecting their lower priority for shading
- *Document Management improvements :*
  - Selections made in the "Apply Date Range Options" dropdown on an Occurrences-scoped document save correctly, even if the "Save" button is used while the dropdown is still open
  - The Excel "Occurrences by Date" scope includes new "Sort By" and "Apply Date Range Options" configuration items, plus a "Show Rows Per" parameter to choose between "Location Occurrence" and "Occurrence" row grouping
  - Custom Document Management reports read their report parameters from their own report definition instead of inheriting them from the parent shell report they were created from
  - The Occurrences scope and Occurrences subreport include two new variables, "Time Sequence" and "Pre-Post Time Sequence", for combining reservation and pre/post event times into a single string
- *Event Quota improvements:*
  - A new Event Quota setting can check usage against the event's overall start and end dates instead of each reservation's occurrences
  - Event Quotas can be limited by day of week, allowing different maximums for weekdays versus weekends
  - When an event exceeds two applicable quotas at once, both quota messages display together in a single alert instead of showing only one
- *Pricing improvements:*
  - An upcoming pricing change will add support for custom email templates within the "Manage Payment" section of an event. Learn more.
  - The Pricing tab on a Draft event with no pricing calculated yet now shows a clear "No Pricing" message on draft events
  - Moving a line item to a new invoice keeps the default invoice's "already billed" handling consistent, making it easier to move items off the default invoice set without disturbing items already placed on other invoices
- The Notification Policy section for locations, resources, organizations, requirements, and event types has a redesigned UI: contacts set to "Approval required" appear under "Approvers", contacts set to "Notify only"

appear under "FYI contacts", and new "Move to" buttons make it easy to shift contacts between the two

- The new "Master Definitions" import type in the Import tool lets admins create or update categories, custom attributes, event types, roles, and other lookup tables from a spreadsheet
- The "Use the Event State Dropdown on Event Details" permission now controls who can see the Event State dropdown when inline editing, separate from who can change event state
- A new Event Save Email variable can display only an event's active occurrences in a table, instead of all occurrences
- The confirmation prompt for bound locations can be dismissed permanently with a "don't show again" option
- Custom sort order for Event Types is preserved when a new Event Type is added
- *Additional Fixes and Improvements*
  - The Expiration Date column in the Masquerade Mapping table sorts by date accurately
  - Ensured content carries over correctly when exporting an Occurrences-scoped Document Management document
  - Made sure saving or copying a subreport no longer triggers an alert, since that setting doesn't apply to subreports
  - Corrected a performance issue that caused 25Live to slow down as a user's Recently Viewed history grew
  - Fixed the "Find Available Locations" dashboard widget returning no results for a meeting pattern or date template search when a user's Assignment Window policy restricted booking within a certain number of days
  - Ensured an event type quota alert doesn't appear erroneously when a date is selected before an occurrence
  - Made sure the "Related Events" checkbox under Document Management pricing variables only appears when appropriate
  - Corrected a display issue that prevented additional time labels from showing in the expanded occurrence view
  - Fixed a resource quantity greater than 1, added by a form rule, not displaying on the event form until after the event was saved
  - Resolved unexpected re-ordering of the occurrence list in "Set For All" after removing a location or resource
  - Addressed locations not showing a delete option in the "More Actions" menu due to a permissions issue
  - Made sure removing a category from the event form saves correctly, matching the existing behavior for inline editing
  - Corrected the "Invoice Payments" variable section in Document Management not displaying selected variables
  - Fixed location filtering under occurrence preferences not triggering unless a resource was also present on the event
  - Resolved a renamed event form configuration failing to load in the event form, even after selecting it from the dropdown
  - Addressed an error when voiding a payment in 25Live that had already been refunded in Stripe, and corrected a blank payment success page after returning from Stripe Checkout

- *10/15/2026 Patch:*
  - Fixed the "Sort Locations by Relevance" button not working after events are filtered in the Academic Grid
  - Resolved the Academic Grid losing the shading that separates filtered events from other events after a location assignment changes
