11/19/2026 – 25Live

- System Settings > Pricing Settings has a new "Invoice Search" option for searching and viewing invoices and payments in tables, available with the permissions.

Academic Grid improvements:

- The hover pop-up on a section in the Academic Grid now has options to add and remove locations for sections that can be moved and for grids with location search configured.
- Hovering over a section on the academic grids now lists all of its warnings at the bottom of the pop-up.
- In the Academic Grid instructor view, sections that don't match the section filters now stay visible but grayed-out instead of being hidden.

Additional Fixes and Improvements:

- In an Organization > Invoices, the "Mark as Paid" option now appears only on manual payments, not on requested payments.
- Improvements have been made to resource assignment windows to handle them the same way location assignment windows are handled.
- The option to show or hide the API Documentation and User Community Forums links in the More menu is now controlled by the permission Tool Access: 10.0 *Show API Documentation and User Community Forums links?*
- On 25Live Organization Details > Associated Contacts, the contacts of a Connect25 organization are now hidden from anyone who isn't allowed to see that organization's members in Connect25.
- Document Management reports can now print a checkbox through a new "Checkbox" variable option on the Requirements and Resources subreport scopes, for example beside each assigned resource on the Event Checklist report.
- Minor usability improvements have been made to the Custom Attributes section of event forms.
- The Add Occurrence date picker on the Event Form now has buttons for skipping forward and back by year.
- Fixed issue where changing the Respond By date of a location assignment task from the task search could result in updates to only some occurrences.
- Fixed an issue that kept users from saving changes such as a new title or custom attribute values on an event if it had a location or resource they couldn't request.
- Corrected an issue where approving assignment tasks from the Tasks page one after another could, at certain speeds, save the approval but skip triggering of an event save email scenario.
- Restored occurrence inline editing behavior where editing an occurrence's setup or takedown time only rechecks the location availability for the specific occurrence rather than the entire event.
- Fixed availability grid behavior where the pencil icon could be incorrectly shown for dates that a location is not available if the event began in the past.
- The "Event List" window opened by selecting the "View All #" button no longer opens a blank window on mobile devices.
- Clicking the "Layout Image" or "Layout Diagram" header on Location Details > Layout Details no longer erroneously removes the image.
